Anasept Testimonial

When compared with other products on the market claiming to have debridement properties, Anasept is a superior product. Patients using Anasept in our outpatient wound clinic had a decrease of at least 25% in nonviable tissue within seven days. Two patients using Anasept had 100% decrease in nonviable tissue within seven days and one patient in four days. I would highly recommend this product as an alternative to enzymatic debridement products as it appears to facilitate healing and promote more positive outcomes for patients. The fact that this product also destroys the biofilm and bioburden all while neutralizing odor is another bonus. Last, but not least the Anasept Gel is significantly less expensive and reimbursable!
