Anasept Testimonial

I wanted to let you know that recently I tried the Anasept Spray & Anasept Gel on one of my residents at a LTC facility, based on your high recommendations. We had such great results that the Wound Dr. who I work with has been ordering this combo at different facilities he works at. Her right medial foot wound was determined to be palliative care d/t thick adherent necrotic tissue that returned quickly after sharps debridement. We started using the Anasept products (about 1 month ago) and the wound bed is filling in with granulation tissue and the necrotic tissue is slowly dissolving! We may actually get this wound to close!

Just wanted you to know. Thanks!!
