Anasept Testimonial

Thank you for the Anasept samples. Overall, we noticed that the product aided in reduction of odor and complimented the instillation therapy with Vera Flo to aid in removal of debris and slough in the wound. I also am choosing this product since I have not had any blockage alarms with it (as with Vashe) and it is cheaper in price per bottle. I would HIGHLY recommend beginning to carry a larger bottle. I have several challenging wounds and sometimes instill 50-85cc every 3-4 hours. Thanks again. Here are the results I found:

Sacral stage 4 pressure injury: 5.6 x 5 x 1.5cm. Foul odor.

6 days later Measures 5.2 x 3.8 x 2.9cm Odor improved (also was begun on IV antibiotics)

Sacral stage 4: Measures 9.5 x 5 x 4, 80% slough and 20% granulation tissue. Purulent drainage, foul odor noted. Antibiotics started

3 days later 85% granulation tissue, 15% slough, NO odor or s/s infection. Measures 9 x 5.2 x 4.4 (may have some increase in size with removal of dead tissue)
